

CERAMIC SURGE ABSORBERS (VARISTORS)

SVC

SVC CHARACTERISTIC

• INTRODUCTION

SVC series Varistors are gapless ceramic surge absorbers of a new type made of metal oxide which is designed to protect various kinds of electronic devices and semiconducting elements from surges.

• FEATURES

1. High discharge current capability up to 4000 Amps.
2. Excellent clamping characteristics.
3. Fast response time under 50 nanoseconds.
4. Improve product safety
5. UL, CSA, VDE recognized

TYPE DESIGNATION (HOW TO ORDER)

SVC 471 D-14A FF 7

Basic Type
ZnO Varistor

Varistor Nominal Voltage
(The first two digit indicate significant digits)
(The 3rd digit indicate the number of zeros following)

Style
D : Disk Type Varistor

Lead Spacing & Pitch of Component

Packing Style & Lead Variation

Classification
A : High Voltage(82V and above)
B : Low Voltage(less than 68V)

Chip Element Size (Dia)
05 : ϕ 5mm 14 : ϕ 14mm
07 : ϕ 7mm 20 : ϕ 20mm
10 : ϕ 10mm

Packing Style		Lead Variation		Packing Style		Lead Variation	
F	Taping Type Flat Pack	S	Straight Type	B	Bulk	S	Straight Long Type
		K	In-Kink Type			W	Kink short Type
		F	Out-Kink Type			K	Kink long Type
						L	Kink short Type
						N	Straight short Type

* Suffix Code

Taping Type	Code	5	7	8	9	1
	Lead Spacing(mm)	5.0	7.5	7.5	7.5	10.0
	Pitch of Component(mm)	12.7	15.0	30.0	25.4	30.0
Bulk Type	Code	5	7	1		
	Lead Spacing(mm)	5.0	7.5	10.0		

CERAMIC SURGE ABSORBERS (VARISTORS)

SVC

SVC CHARACTERISTIC CURVES

V - I CURVE

- Small - current region of V - I curve

- Temporary power frequency over voltage capability

B TYPE

- Withstand discharge impulse current characteristics (Typical)

A TYPE

- Withstand discharge impulse current characteristics (Typical)

CERAMIC SURGE ABSORBERS (VARISTORS)

Notes :

- ① The waveform of the maximum DC applied voltage is flat. When a ripple voltage as from a rectifier source is supplied make sure that the peak voltage is kept under the Vdcm.
An AC applied voltage(50/60Hz) form a sine wvshape.
When the distortion in the waveform is extensive make sure that the peak voltage is less than $\sqrt{2}$ times the Vacm.
- ② Energy : Wtm
Transient energy ratings are given in the Wtm column of the specifications in Joules (watt-second).
The rating is the maximum allowable energy for a single impulse of 2ms square-waveform current with continuous voltage applied. Energy ratings are based on a shift of Vnom of less than $\pm 10\%$ of initial value.
- ③ Transient peak current (Itm)
The peak current rating. Itm. of varistor is based on an 8/20 μ s test impulse wvshape.

This peak current is the maximum peak current in which the nominal varistor voltage shift does not exceed $\pm 10\%$ when the test impulse is applied twice at 5 minutes intervals.

- ④ Nominal varistor voltage : Vnom
Indicates the varistor terminal voltage measured with a 1mA DC applied. -0.1mA DC in the case of the 0.5A and 05B series.
 - ⑤ Maximum clamping voltage : Vc
Indicates the peak terminal voltage measured with an 8/20 μ s impulse current applied.
- Operating ambient temperature : -40°C to +80°C
 - Storage temperature : -40°C to +125°C
 - UL and CSA recognized (UL 1449, UL 497B or UL 1414, CSA)
SVC varistors have been tested by Underwriter's Laboratories, Inc. and Canadian Standards Association
UL File No. E97754, E151195, E154171.
CSA File No. LR78923.

SVC

APPLICATIONS

- The protection of semiconducting elements such as diodes, thyristors, transistors, IC and relays against transient voltages.
- Similar protection of many types of measuring instruments, control machinery and communication equipment and broadcasting equipment against inductive lightning and switching surges.
- Protection of general purpose electrical equipment, domestic machinery and appliances. TV and radios and similar consumer products against lightning and switching surges.

Power supply circuit protection

Line circuit

Varistor voltage selection table (Z_L)

Power supply voltage	Type
100V AC	SVC201D-□□A SVC221D-□□A SVC241D-□□A SVC271D-□□A*
200V AC	SVC391D-□□A SVC431D-□□A SVC471D-□□A*
12V DC	SVC220D-□□B
24V DC	SVC390D-□□B

Notes :

- ①The power supply voltage must not exceed the maximum allowable circuit voltage.
- ②Since independent wiring loads and capacitive loads cause the voltage build-up at the time of opening or closing the load, use SVC having a varistor voltage as high as possible. (* mark)
- ③The bold faced portions of the type letters vary.

AC/DC single-phase circuit

AC three-phase circuit

Line and ground circuit

Varistor voltage selection table (Z_E)

Power supply voltage	Type
100V AC	SVC431D-□□A
200V AC	SVC471D-□□A SVC751D-□□A to SVC 112D-□□A* SVC182D-□□A**

Notes :

- ①When subjected to megger testing (500V DC), the insulation resistance value can decrease due to the leakage current of the SVC. To avoid this remove the varistor or use * marked SVC.
 - ②When subjected to dielectric strength test(1000V AC). remove the SVC or use** marked SVC.
- Select varistors taking a note of operating conditions peculiar to the equipment.

AC/DC single-phase circuit

AC three-phase circuit

Telecommunication circuit protection

Varistor voltage selection guided

Power supply voltage	Type
12V DC	SVC180D-□□B SVC220D-□□B SVC820D-□□A
24V AC	SVC390D-□□B SVC820D-□□A

Notes :

The varistor SVC has a capacitance value. Take note of this when applying them to high-frequency signal circuits.

Switching circuit protection

Protection of relay (Contact coil)

Protection of semiconductors

Varistor voltage selection guide

Power supply voltage	Type
12V DC	SVC220D-□□B
24V DC	SVC390D-□□B
100V DC	SVC151D-□□A
100V AC	SVC201D-□□A SVC221D-□□A SVC241D-□□A SVC271D-□□A

Notes :

- ①The power supply voltage must not exceed the maximum allowable circuit voltage of the SVC
- ②Pay due attention to the surge energy generated by the load.
- ③Select SVC referring to the pulse lifetime rating.
- ④To further reduce the tendency of sparking across the contacts connect a capacitor parallel with the SVC. This will also protect the equipment from electromagnetic wave jamming.

SVC

Application notes

1. Overcurrent protection

When surges exceed the rating for the SVC, short-circuits or damages can be expected. Take following precautions.

① Connect the SVC at a position nearer to the equipment than the overcurrent protection device “I” (fuse, MCCB) as is shown in the diagram.

When the SVC is shorted, the overcurrent protection device “I” operates (trips or blow off the fuse).

② If the overcurrent protection device “I” can not be installed in “I” position, connect a fuse at “II” position. Select fuse rated current for the SVC referring to the following table.

SVC	05A 05B	07A 07B	10A 10B	14A 14B	20A 20B
Applicable fuse rated current(A)	1 to 2	2 to 3	3 to 5	3 to 10	5 to 15

③ When “Z₂” SVC is connected between the equipment and ground install an ELCB (Earth Leakage Circuit Breaker). If not possible, connect a fuse or thermal fuse at “III” position.

2. Installation

① When operated at location near heating element or exposed to direct sun light, confirm that the the ambient temperature range.

② When operated in dusty or dirty locations, or exposed to corrosive atmospheres, or where metallic powders or salt can be expected, be sure to mount within a protective enclosure.

3. Molding

When shielding the SVC in a resin molding, take a note of the materials used and temperature, since they influence the reliability. For further information please contact SAMWHA

4. Current, power and energy rating vs, temperature

5. Electrical Characteristics

Operating ambient temperature	-40°C to + 85°C
Storage temperature	-40°C to + 125°C
Voltage temperature coefficient	-0.05%/°C
Insulation resistance(at500V)	Over 1000MΩ

SVC

Varistor Terminology

• **Varistor Voltage : V_{nom}**

Varistor peak terminal voltage measured with a specified current applied
The DC current applied is 1mA normally.

• **Clamping voltage : V_c**

Maximum terminal voltage (peak voltage across the varistor) measured with an applied 8/20μs impulse of a given peak current.

• **Capacitance**

Typical values measured at a test frequency of 1kHz

• **Rated peak transient current : i_{tm}**

Maximum peak current through the varistor with line voltage applied.
The maximum peak current with in the varistor voltage change ratio of ±10% with the standard 8/20μs impulse current applied two times at 5 minute interval.

• **Rated transient energy : W_{tm}**

Maximum allowable energy for a single impulse of 2ms square-wave current waveform with rated continuous voltage applied. Maximum energy rating base on a shift of V_{nom} of less than ±10% of initial value.

• **Pulse lifetime rating**

This is expressed as the maximum allowable number of impulse currents applied.
8/20μs impulse current (or 2ms square wave) is applied at prescribed interval.
This curve also provides for derating current as required with repetitive pulsing.

• **Tset current waveform**

Characteristics tests for Varistors are carried out by using 8/20μs test impulses Data such as the maximum clamping voltage(V_c)and the transient peak current(i_{tm}) are obtained by using this impulse current.

However, for the V_c characteristics of the Axial package type a 10mA DC squarewave current is used to carry out the test.

• **Rated RMS Voltage : V_{acm}**

Maximum continuous sinusoidal RMS voltage at 50/60Hz which may be applied.

• **Rated DC Voltage : V_{dcm}**

Maximum continuous DC voltage which may be applied.

• **Rated average power dissipation : P_{tam}**

Maximum average power that can be applied within the specified ambient temperature.
